

Are You Addressing Endpoint Security Gaps?

How did we get here?

Roughly **200 billion** connected devices, yet nearly **15%** of organisations do not use any form of endpoint security

What are these security gaps costing us?

Non-compliance with GDPR, CCPA, HIPPA, PCI-DSS and other regulations have cost companies more than **£1.12 billion** over the last eight years

Why is endpoint security so complicated?

Expanding list of devices connecting to the network

52% of organisations report budget constraints as the biggest challenge related to implementing and deploying a physical device security policy for portable devices

Increase in BYOD programs, desk sharing and mobile/remote workforces

By the end of the year, **90%** of businesses will utilise some form of 2-factor authentication (2FA) that includes biometrics

Employee non-compliance with data protection policies

Less than 3% of employees use privacy screens while on the road or out of the office and **only 9%** of organisations require full compliance with company security policies

What are the best practices?

- Deploy Physical Device Security for ALL Portable Devices
- Utilise Simple Solutions for End-Users
- Implement 2nd-Factor or Multi-Factor Authentication

- Train, Track, Certify and Enforce Compliance
- Seek Additional Cost-Effective Ways to Protect Data
