

Do You Need a Monitor Arm? LET'S FIND OUT!

Ask yourself or your teammates the following questions...

YES NO

- Is your work highly visual? For example coding, videography, photo-editing, data-based or graphic design... ?
- Would you benefit from being able to rotate your external monitor from landscape to portrait mode, or switch from side-to-side to vertically stacked configuration to cater to different tasks?
- Would it be easier to share work with colleagues if you could swivel your external monitor from left to right for teammates to review?
- Do you use a dual monitor set-up every day?
- Do you or your employees find yourself fighting with monitor stand or riser, constantly having to adjust your monitor back and forth, side to side, unable to find a comfortable viewing posture?
- Is your current monitor arm or mount not adjustable enough to allow you to find a comfortable viewing posture?
- Have you struggled to find a comfortable position and the promised productivity with your dual, curved or large external monitor setup?
- Do you or any of your employees have neck tension?
- Do you or any of your employees log off each day with dry, tired eyes? Or find yourself squinting to view your screen?
- Do you find yourself craning your neck or lunging your upper torso forward to view your screen?
- Do you wear corrective lenses and have difficulty finding the right monitor position and angle for comfortable viewing because of a lack of adjustability?
- Do you work in a shared workspace where employees need to set up optimal monitor heights quickly? Do some employees or teammates report an inability to find a comfortable work posture?
- Do you work at a sit-stand or standing desk and wish you could quickly and easily fine-tune the position and angle/tilt of your external monitor?
- Do you work at a desk with a shallow depth or in a shared workspace with benching style workstations? Are you unable to find a comfortable position with your current monitor mount because the wall behind or adjoining desk prevents full adjustability?

If you've found yourself answering **yes** to any of these questions for you or your employees, you should consider a monitor arm as a solution. Check out all the monitor arm solutions that Kensington has to offer by visiting our website at [kensington.com](https://www.kensington.com)
