

VeriMark™ Guard Setup Guide

Kensington takes pride in making our comprehensive installation guides easy to follow with simple illustrations and step-by-step instructions. This guide will walk you through setup and help you get to know your VeriMark™ Guard.

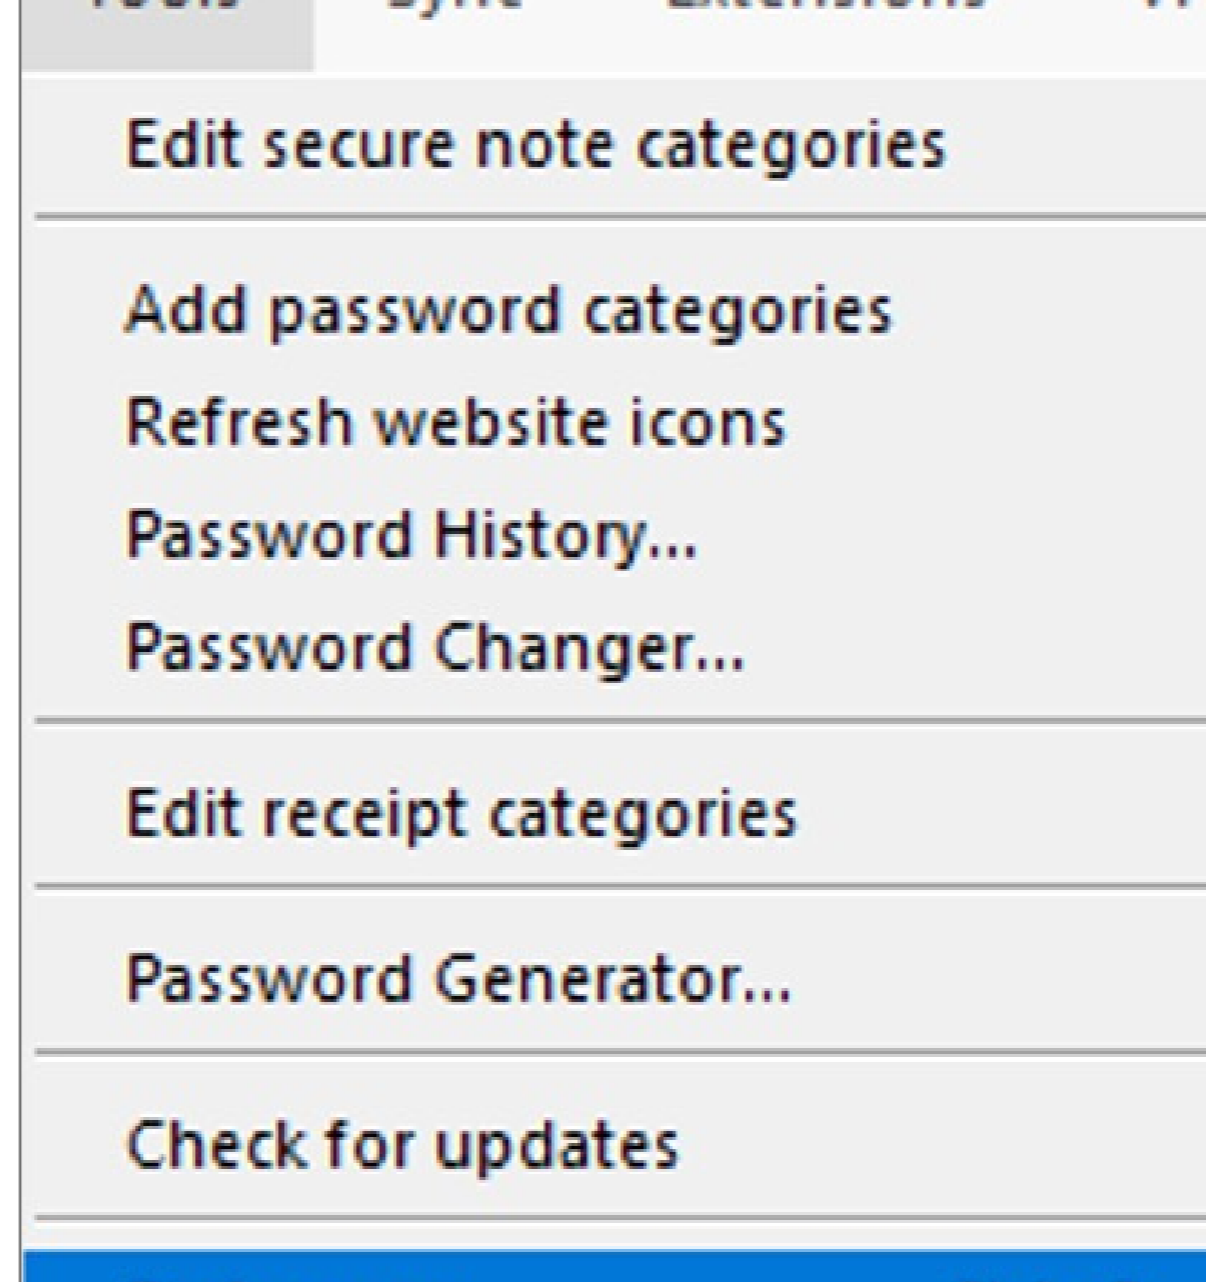

Please update operating system (Windows 10, Chrome OS and macOS) before setting up VeriMark™. If using an online service for WebAuthn make sure you use the latest browser version for (Edge, Chrome, Safari and Firefox.)

VeriMark™ Guard Dashlane Setup Guide

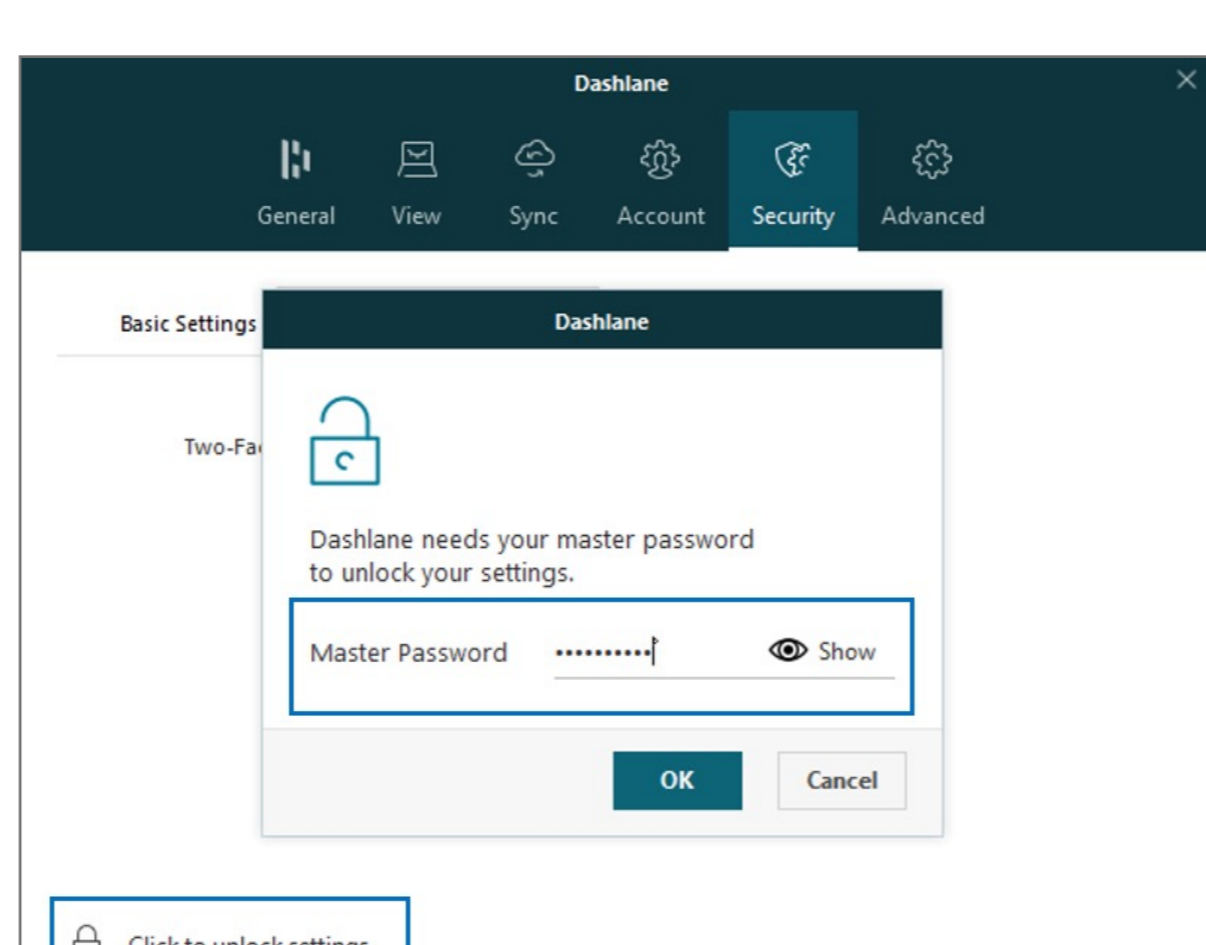

Before we start

You **must** download Dashlane application for Windows from the following link. <https://www.dashlane.com/download>

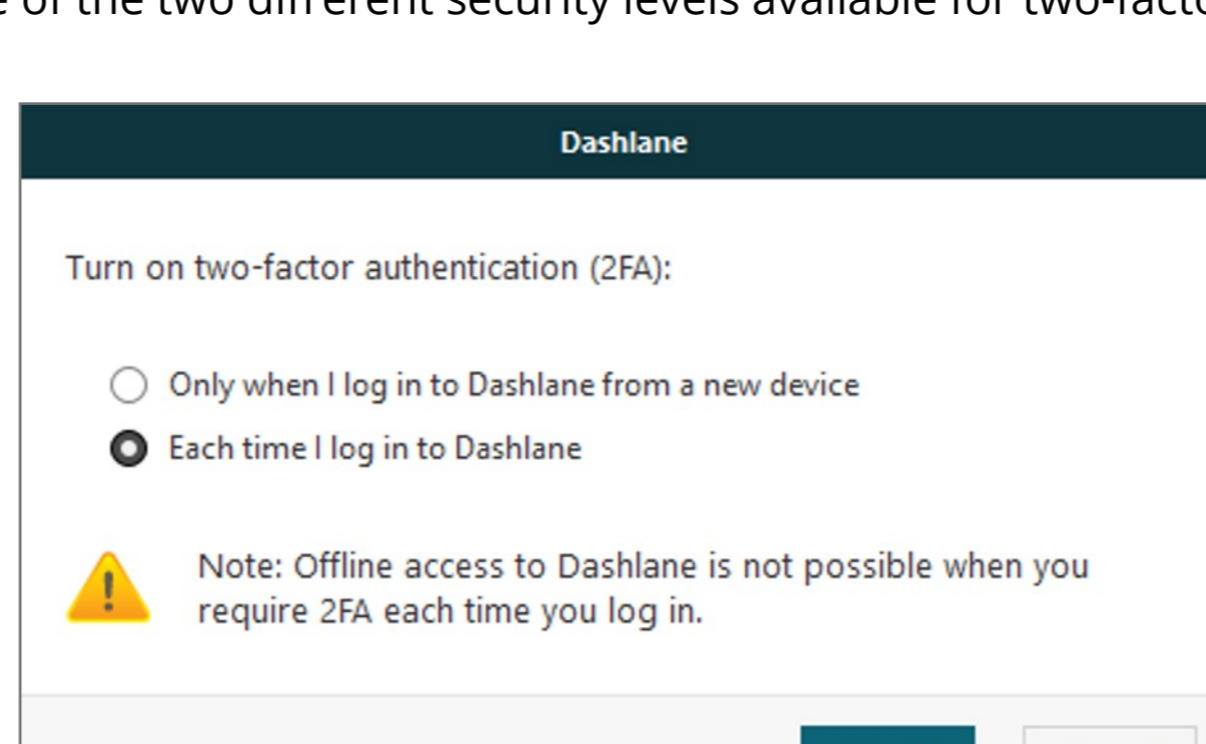

- To enable two-factor authentication, go to **Tools > Preferences**

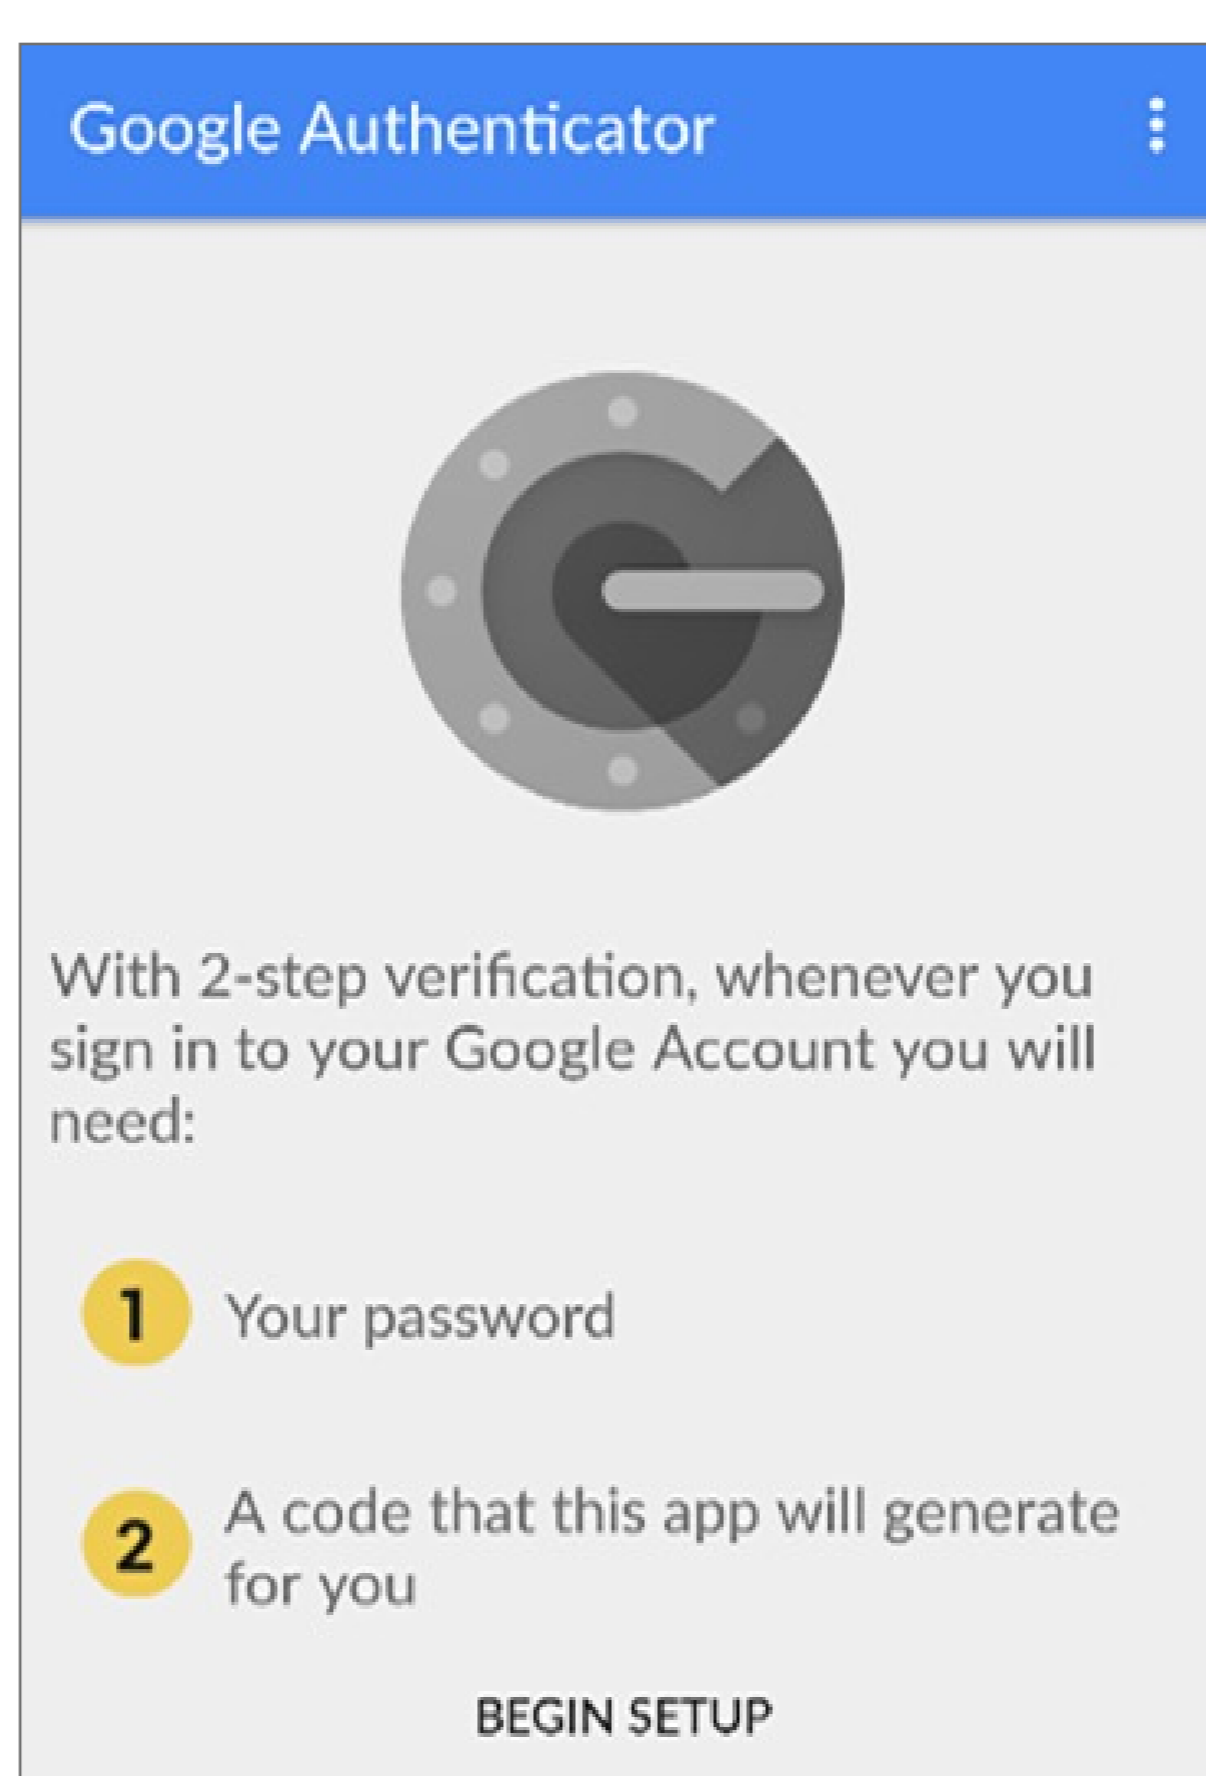

- Open the **Security** tab, and click on the **Two-Factor Authentication** sub-tab and **click** on the lock icon at the bottom of the window to unlock the Settings (you will be prompted to enter your Master Password), then click on the switch to **enable** two-factor authentication.

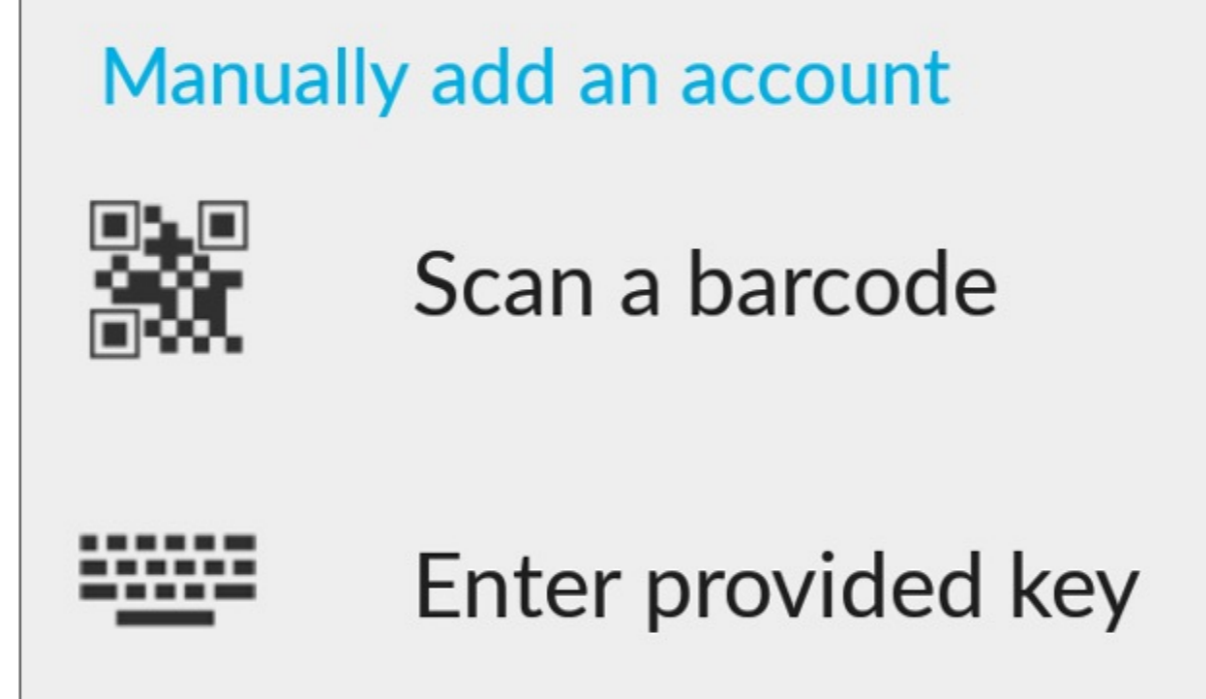

- Choose one of the two different security levels available for two-factor authentication

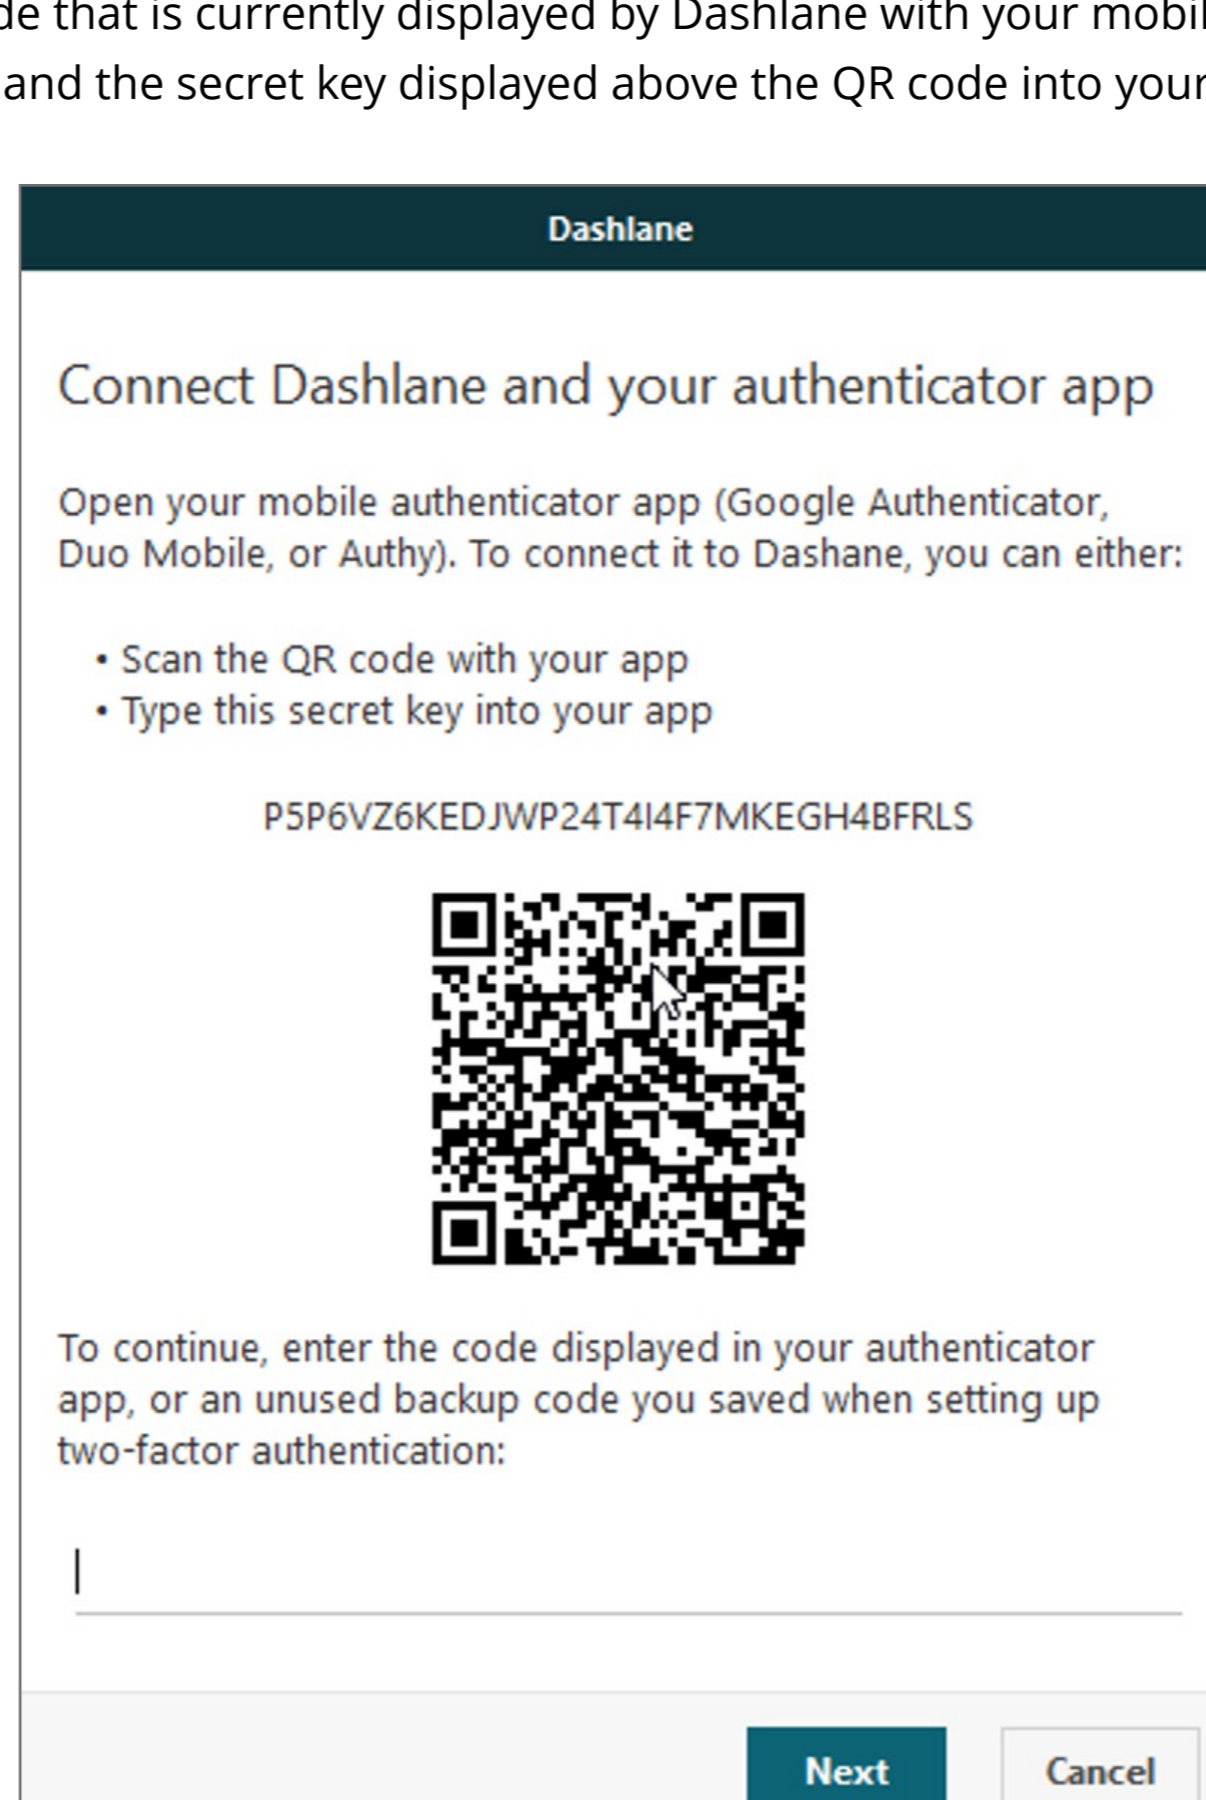

- Now it is time to use your two-factor **authentication app**. We are going to use Google Authenticator as example here but Microsoft Authenticator App can also be used

- Tap on **Scan a Barcode** if your mobile device has a camera. If your mobile doesn't have one, choose **Enter provided key** instead.

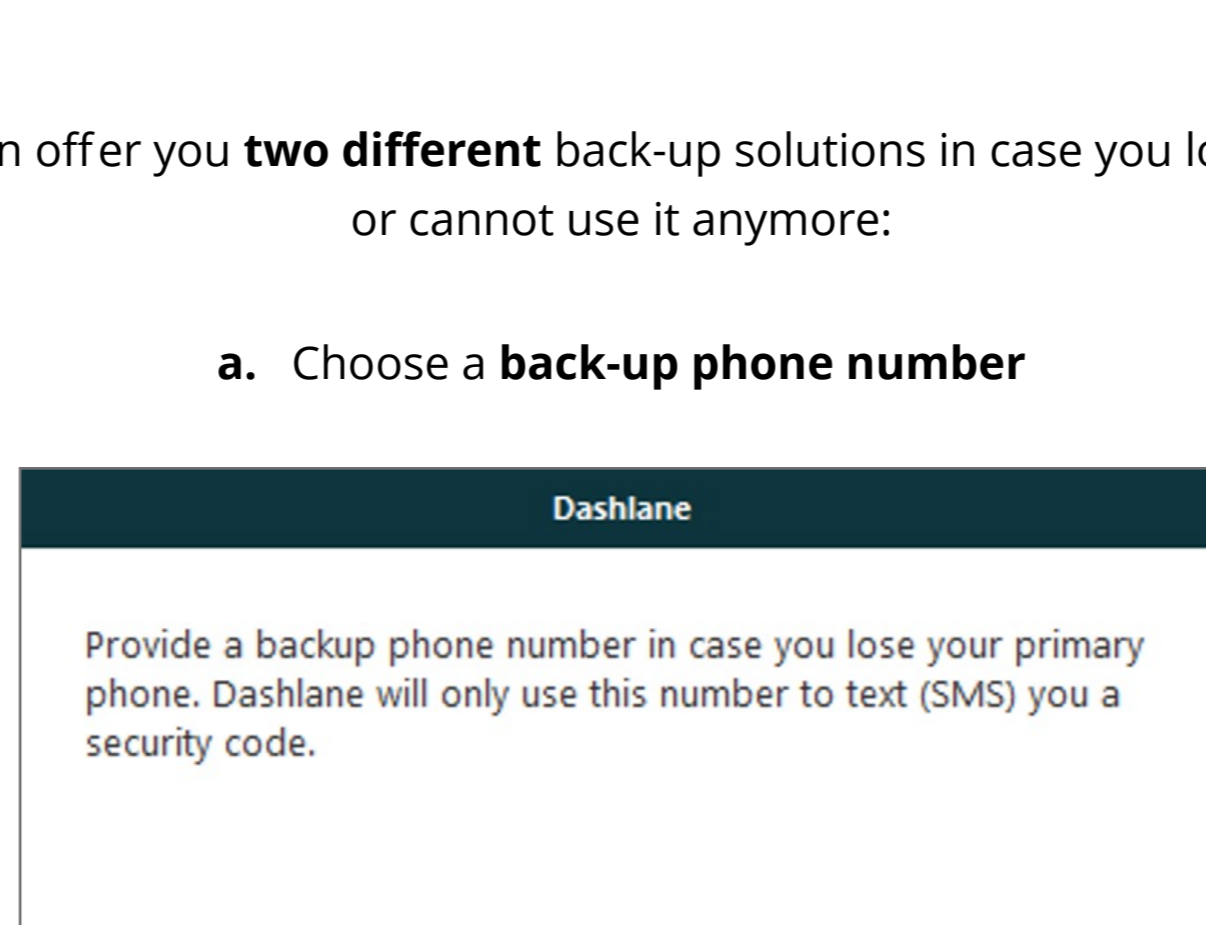

- Then, **scan** the QR bar code that is currently displayed by Dashlane with your mobile's camera, or **manually enter** your Dashlane email address and the secret key displayed above the QR code into your two-factor authentication app.

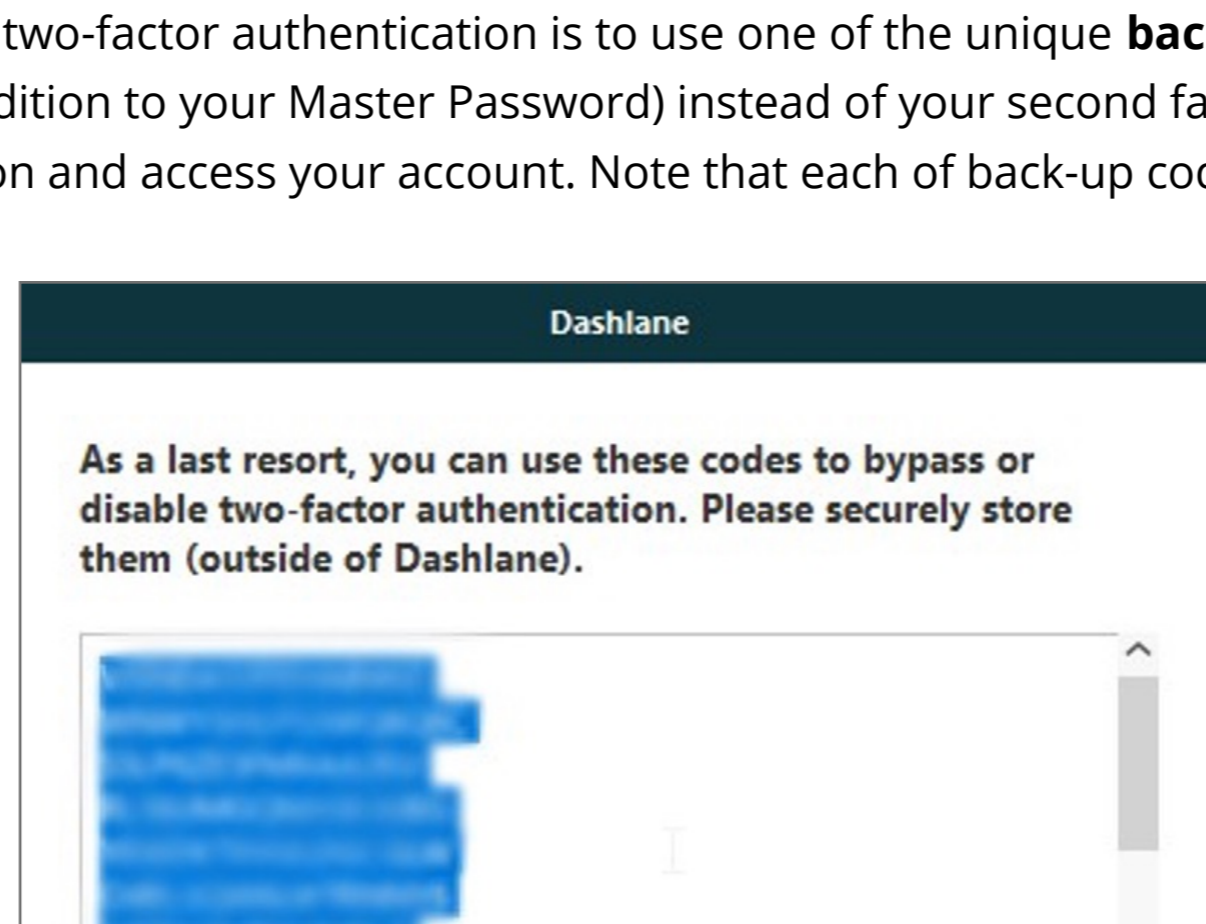

- Enter the **code** generated by your app into the field provided by Dashlane. The two-factor authentication app should then start generating 6-digit codes that **change** every 30 seconds.

- Dashlane will then offer you **two different** back-up solutions in case you lose your mobile device or cannot use it anymore:
 - Choose a **back-up phone number**

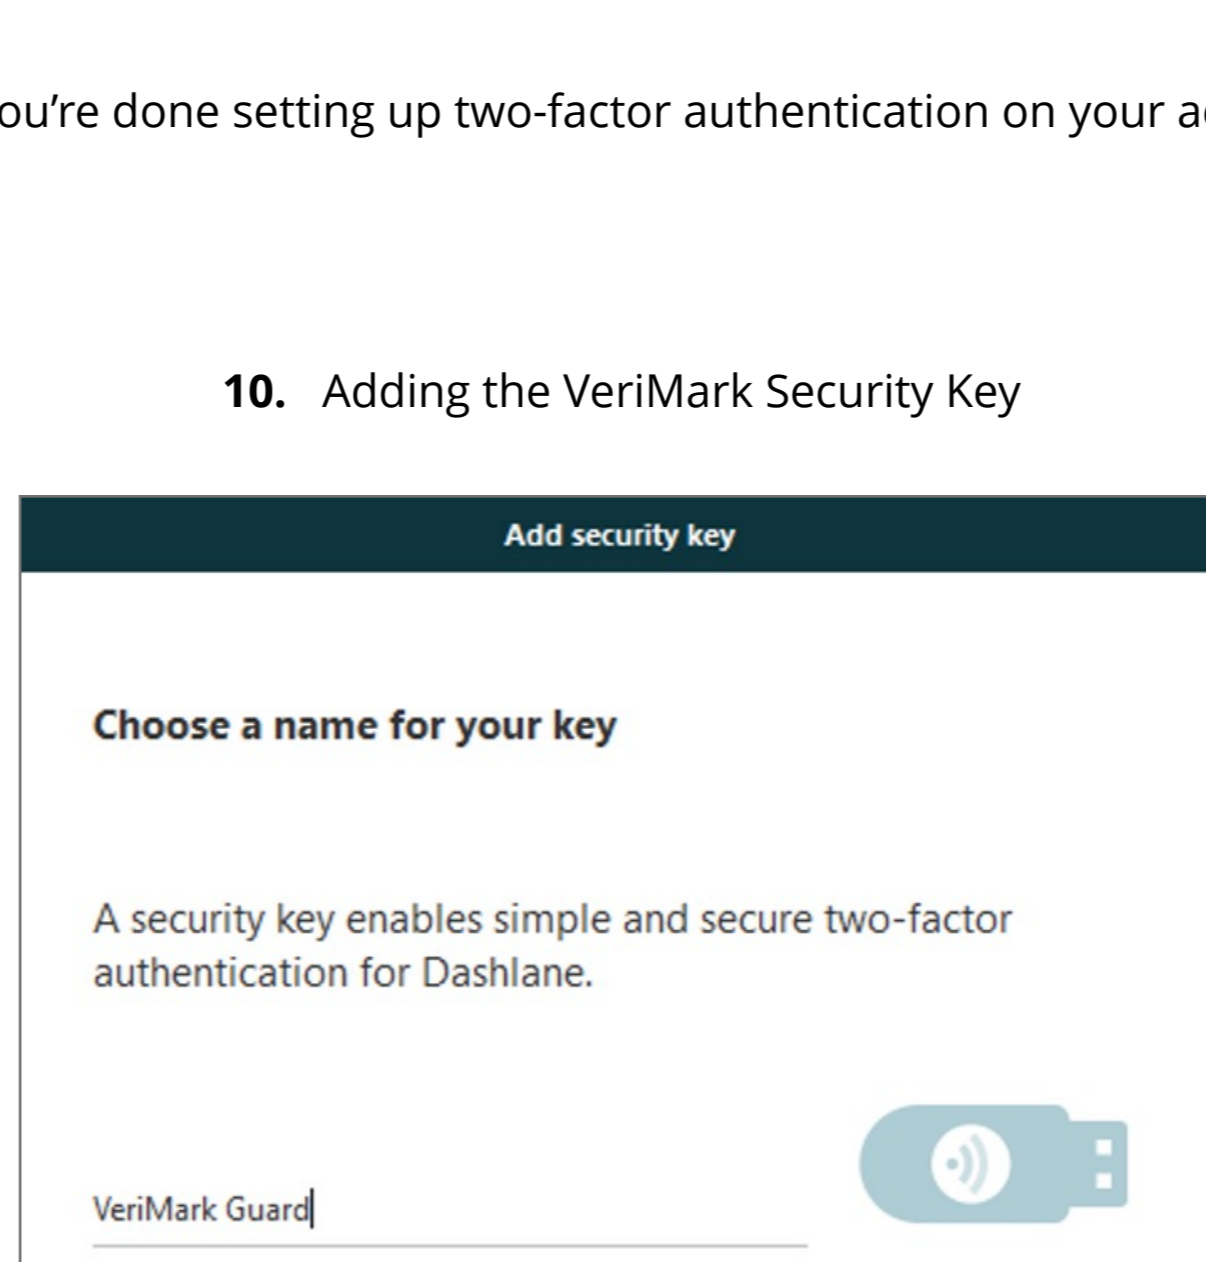

- The other way of disabling two-factor authentication is to use one of the unique **back-up codes** you will be provided with. Use one of them (in addition to your Master Password) instead of your second factor to temporarily bypass the two-factor authentication and access your account. Note that each of back-up code can only be used once!

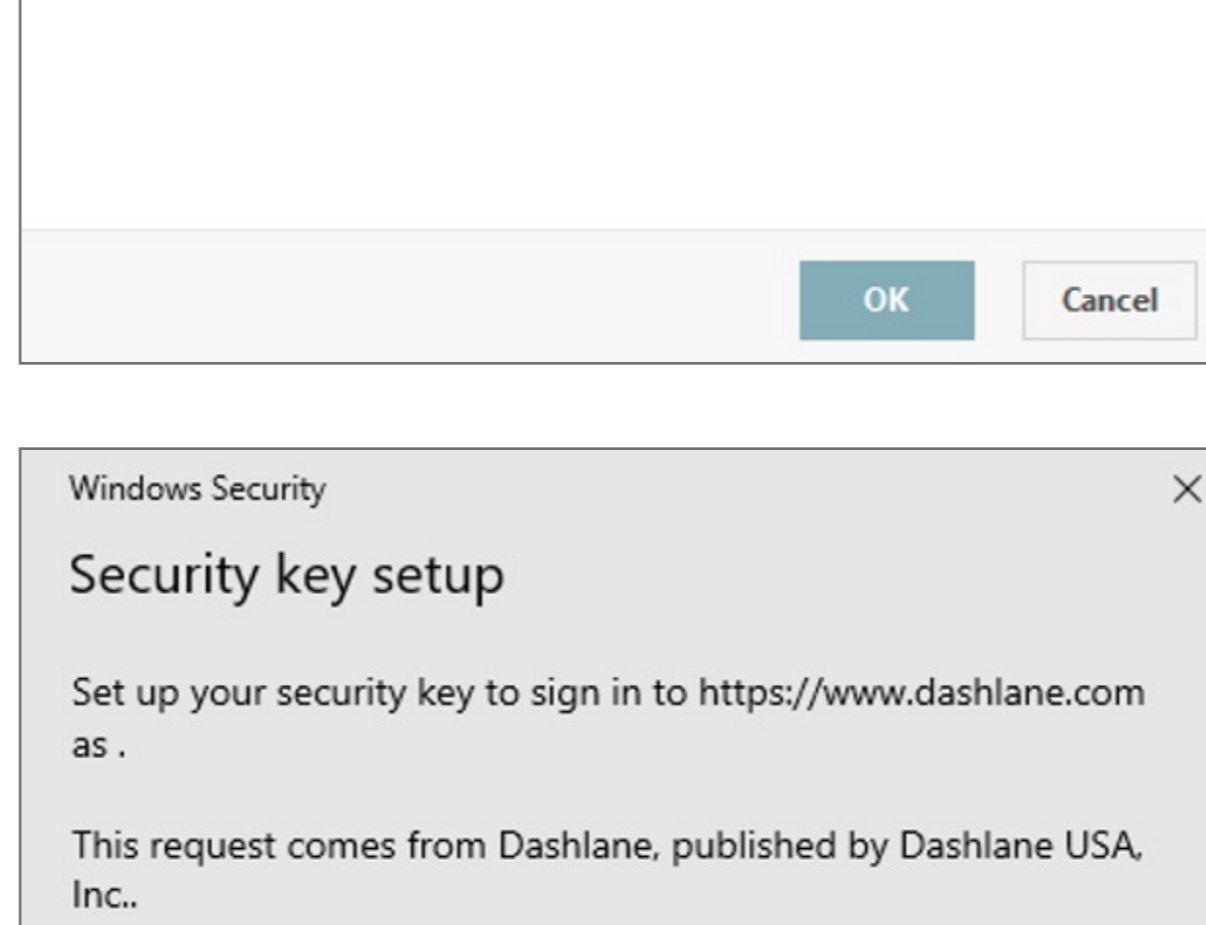

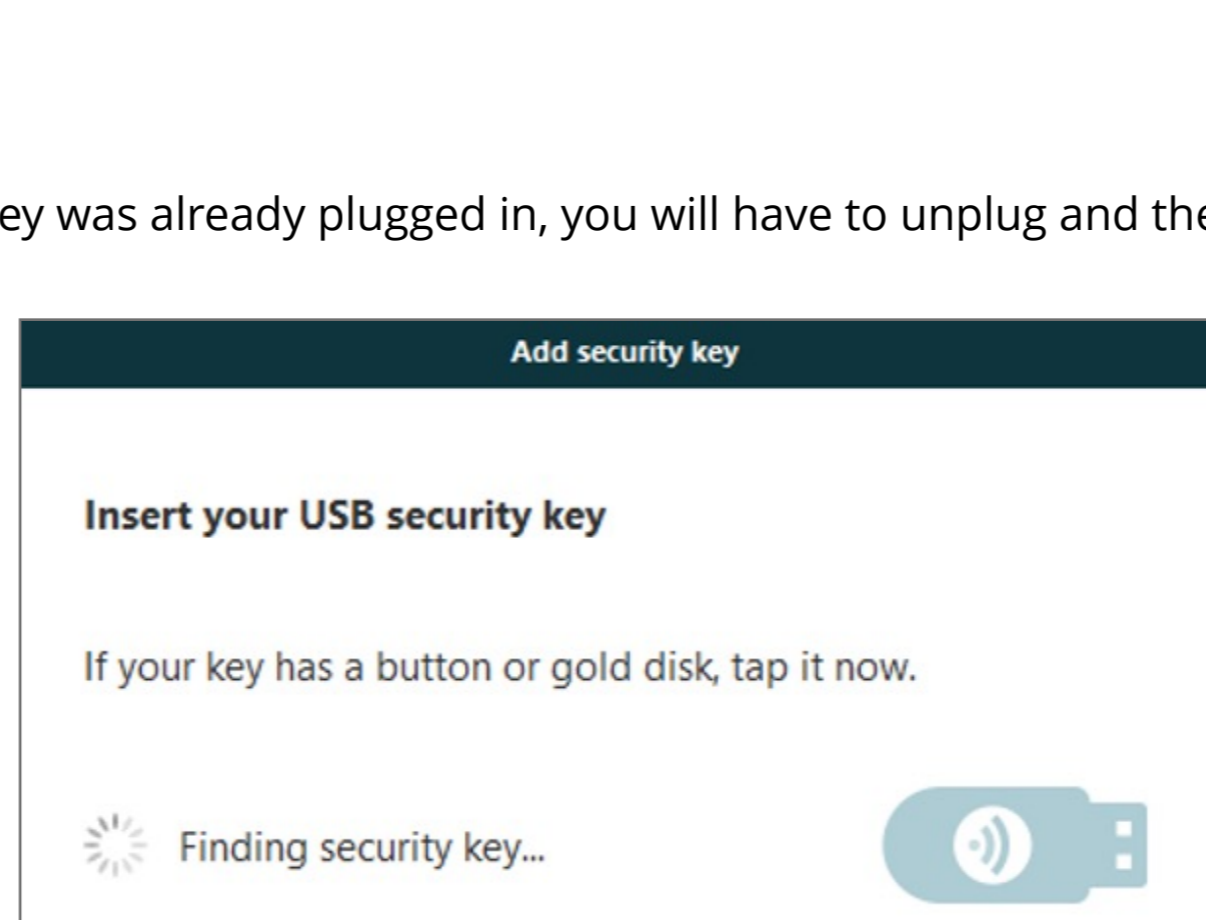

Make sure to save these codes as a .txt document for later use.

- You're done setting up two-factor authentication on your account

10. Adding the VeriMark Security Key

- If your security key was already plugged in, you will have to unplug and then plug it back in again.

- A few seconds later, Dashlane will prompt the message below informing you that your U2F security key has been added.
